
how to access a file share in windows vista Apple Training

Posted by EPTING, JR., JIM - 2010/02/07 23:28

I have a couple of laptops running Windows 7 and IE8 that soon will be shared using a common login. I've been using a combination of SteadyState and registry changes in Vista & XP, but they are not available in Windows 7. The shared access login is not part of the campus AD, so I don't think that group policies will work. Does anyone have any HKCU settings to share or some other resources? Steve Nelson
